INFILL

TURF ARMOUR ARTIFICIAL TURF INFILL

FOR HIGH TRAFFIC & SPORTS

Antimicrobial, Non-Compacting Infill for Cleaner, Weed-Resistant Turf.

Clean turf that stays springy.

Turf Armour begins with high-purity silicon-dioxide sand, then encapsulates each grain in a proprietary epoxy-acrylic shell enhanced with a zinc-based antimicrobial additive. The coating keeps organic build-up at bay and prevents the grains from locking together—so your artificial grass stays free-draining, flexible, and weed-resistant season after season.

PUTTING GREEN SILICA SAND INFILL

SILICA SAND FOR ARTIFICIAL PUTTING GREENS

Premium Grass Blades Silica Sand 50–100 Grit is a high-purity, kiln-dried infill engineered specifically for artificial putting greens where precision matters. The tightly graded particle size allows for exceptional control over green speed, firmness, and ball roll consistency, making it ideal for fine-tuning performance to match player preference.

The angular grain structure helps lock fibers in an upright position while minimizing movement over time, resulting in a smoother, truer roll and reduced maintenance. Its clean composition ensures easy installation and even distribution, without compromising drainage or surface stability.

This infill is the professional choice for installers and golfers seeking a customizable, tour-quality putting surface with reliable performance

and long-term durability. Designed to pair seamlessly with Premium Grass Blades putting green systems, it delivers consistency you can see—and feel—on every putt.

Recommended 2-4 lbs per sqft for putting greens.

Price: \$17.50

ZEOLITE DEODORIZER ARTIFICIAL TURF INFILL

Natural Zeolite Infill for Odour Control & Moisture Balance.

Fresh turf for active spaces.

Zeo Odour™ starts with premium clinoptilolite zeolite—a volcanic mineral whose honey-comb crystal lattice captures ammonia vapours and holds a whisper of moisture. The result is an infill that keeps pet areas smelling clean while helping turf feel comfortable underfoot.

Application:

To be used on top of Premium Grass Blades turf to help weigh down the turf and assist with keeping the turf blades standing tall and upright. Acts as a ballast for heat transfer from cold nights to hot days.

Recommended 1.5 lbs per SqFt for small dogs and regular areas, and 2-3 lbs per SqFt for larger dogs.

Suggested Uses: Playgrounds and areas where children come into contact with the turf, pet areas, or pet runs.

SILICA SAND ARTIFICIAL TURF INFILL

INFILL FOR REGULAR ARTIFICIAL TURF PROJECTS

Washed Quartz Sand Infill for Everyday Lawns.

Reliable ballast. Proven performance.

Silica Classic employs triple-washed, kiln-dried quartz sand to lock turf in place, support blade posture, and promote rapid drainage—delivering cost-effective stability for most landscape projects.

Application:

To be used on top of Premium Grass Blades turf to help weigh down the turf and assist with keeping the turf blades standing tall and upright. Acts as a ballast for heat transfer from cold nights to hot days.

Recommended Use:

For general turf stabilization and performance, apply 1.5 to 3 lbs of Silica Classic per square foot, based on turf density, blade height, and intended foot traffic:

Low-traffic lawns / light use: 1.5-2 lbs per square foot

High-traffic or sports areas: 2.5-3 lbs per sq ft

Shorter or denser turf may require less infill, while taller blades benefit from deeper ballast to maintain upright posture.

Installer Tip:

For pet-friendly installations, top-dress Silica Classic with Zeo Odour

Silica on bottom for weight and turf stability, Zeo on top for targeted odor control.
